## PROFESSIONAL SUMMARY

Full Stack Software Engineer with 7+ years of experience building production healthcare applications using React, TypeScript, Elixir, and PostgreSQL. Skilled in designing scalable APIs, event-driven systems, background job processing, and modern UI architectures. Recently focused on AI-powered developer tools, including autonomous research workflows and RAG-based documentation assistants.

## TECHNICAL SKILLS

Programming Languages	TypeScript, JavaScript, HTML, CSS, Elixir, Java, Python
Frontend	React, Angular, Next.js, Tailwind, Bootstrap, Material, Gradio
Backend	Elixir(Phoenix), Node.js, Express, Spring, Hibernate, REST APIs
Data	PostgreSQL, SQL, Prisma, Ecto, Mongo, Supabase
Dev Tools	Git, Docker , AWS(S3, EC2, RDS), Jenkins, Maven, Atlassian Bamboo, CI/CD, Agile/Scrum
AI	OpenAI Agents SDK, CrewAI, LangGraph, AutoGen, MCP, RAG pipelines, vector search, LLM integrations

## EDUCATION

Florida International University - Miami, Florida

Bachelor of Science in Information Technology - Software Track

May 2016

## AWARDS AND CERTIFICATES

FrontEnd Developer(React) Certificate

Issued by: HackerRank Feb 2026

AI Engineer Agentic Track: The Complete Agent & MCP Course

Issued by: Udemy Dec 2025

Notable mention for the AMAZE App on Harvard Business Review's article "*How to Accelerate the Adoption of Digital Health Technology*"

Certified SAFe® 4 Practitioner Scaled Agile Inc Oct 19 – Oct 20

## EXPERIENCE

### Elevance Health/Mosaic Health — Software Developer II

Sep 2021 - Jan 2026

- ❑ Collaborated with other Software Engineers, QAs, Product Owners, Stakeholders and Senior Analysts to follow SDLC methodology including requirements gathering and analysis, technical feasibility, design,coding and testing.
- ❑ Delivered end-to-end features in Agile teams, collaborating closely with product, QA, and UX.
- ❑ Assisted in the sunsetting of a legacy EMR system by facilitating secure data transfer, transitioning the application to read-only mode, and decommissioning automated processes.

### Projects:

- Casper EMR

- Built and maintained clinician-facing EMR features using React, TypeScript, and Elixir, supporting high-volume healthcare workflows.
- Designed and consumed RESTful APIs powering real-time patient data interfaces and operational dashboards.
- Led PostgreSQL schema changes and production data migrations with zero-downtime deployment strategies.
- Contributed to event-driven architecture for cross-service data ingestion and system communication.
- Implemented background job processing with Oban for asynchronous data synchronization and large batch operations.
- Helped in maintaining and updating the Cron job scheduler for generating various files and running database jobs and API calls

## **UST Global, Cerritos, California — Software Developer**

Apr 2018 - Sep 2021

- Collaborated with other Software Engineers, QAs, Product Owners, Stakeholders and Senior Analysts to follow SDLC methodology including requirements gathering and analysis, technical feasibility, design, coding and testing

### **Projects:**

- **AMAZE**: a mobile/web app for Anthem's CareMore that offers a simple way to manage patient information and streamline clinician workflow and processes
  - Developed front end code in various languages (HTML/HTML 5, CSS/SCSS, JavaScript/TypeScript) while employing the Angular Framework
  - Participated in database modeling to ensure best practices
  - Wrote server-side code (Java) while utilizing the Spring Framework and Hibernate ORM
  - Continuous deployment of code to a central repository in a CI/CD pipeline

## **Revature, Tampa, Florida — Software Developer**

January 2018 - April 2018

- Received extensive training on the latest high demand technologies
- Worked individually and in a team setting to deliver enterprise level applications

### **Projects:**

- **Hydra** is an ecosystem of applications in an extensible microservice architecture. Hydra provides the infrastructure and pipes for all services to expose APIs to the client applications, and these include service discovery, centralized configuration, and load balancing. Janus is an Angular 4 application that is the primary client for Hydra
  - Restructured the projects architecture to better capitalize on the benefits of microservices
  - Wrote Unit tests while employing the RESTAssured framework which is built on Junit
- **The Quid** application is an educational game with a focus on learning programming concepts. It is an Angular 4 app which features web sockets usage to ensure a real time experience to its players
  - Developed many of the client views that were crucial to the application, by using Angular components

## **PROJECTS**

### **Deep Research Agent - [https://huggingface.co/spaces/ricardo-viera/deep\\_research](https://huggingface.co/spaces/ricardo-viera/deep_research)**

- Built an autonomous AI research assistant that gathers, summarizes, and synthesizes information across multiple sources.
- Implemented multi-step reasoning workflows for long-form, structured answers.
- Designed an interactive UI for iterative research and query refinement.
- Users can choose to email the research to their personal email when done.

### **Career Conversation (AI Resume Agent) - [https://huggingface.co/spaces/ricardo-viera/career\\_conversation](https://huggingface.co/spaces/ricardo-viera/career_conversation)**

- Created an AI agent that answers questions about my experience using my resume and portfolio as context.
- Enables recruiters and hiring managers to explore my technical background through natural conversation.
- Users can save their contact info. Details are stored in a MongoDb Atlas cluster.

### **AI Product Copilot**

- Built an AI documentation assistant that allows users to upload product docs and chat with them using semantic retrieval.
- Implemented document chunking, embedding storage, and context-aware response pipelines.
- Developed a streaming chat interface with persistent conversations and server-side storage.
